

- Collection of clothes, shoes, textiles and leather goods is implemented through 25 red bins that are placed in our town. These items are either distributed to vulnerable population groups or sent to recycling. This process has further benefits, as it does not harm the environment and the Municipality pays no burial fees. Furthermore, the company that collects the contents of the red bins provides our Social Grocery Store with food and basic necessities in return.

- Creation of a Multipurpose Center of "Reciprocal Recycling", in the context of the Ministry of Internal Affairs pilot program, called "New Generation of Recycling".

- Implementation of "Food Wave", the most environmentally friendly action carried out in our Municipality. Its aim has been to raise awareness among young people about the need to limit food waste, as well as to inform them of its effect on climate change.

- Preparation and distribution of brochures, in order to inform citizens about proper recycling processes.

Rewards

- Our Municipality has received the Green Award for its efforts on composting, at the 4th International Verde.tec Exhibition.

- We have also received a Bronze medal at the Best City 2022 Awards, for recycling PE and PET waste, to create biodegradable bioplastics for food and beverage packaging (upPE-T, in the context of Horizon 2020 program).

- Primary school pupils from our Municipality, who have excelled in the recycling effort, have been awarded as well.
